

START REALISING YOUR DREAM by measuring your room following the instructions below.

- We will assist you in designing your new kitchen or cupboards using our state-of-the-art 3D technology.
- Choose your own finishes, worktop, doors and accessories to create your own signature designs.
- Your UCAN kitchen units or cupboards will be delivered directly to you supplied flat packed or as pre-assembled carcasses for easy installation.

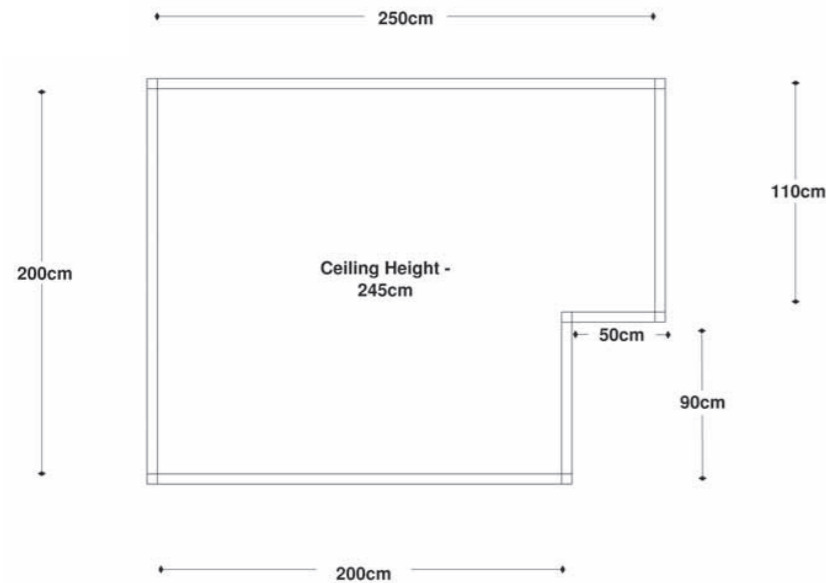

HOW TO MEASURE YOUR KITCHEN

(Great Designs begin with accurate Measurements)

STEP 1

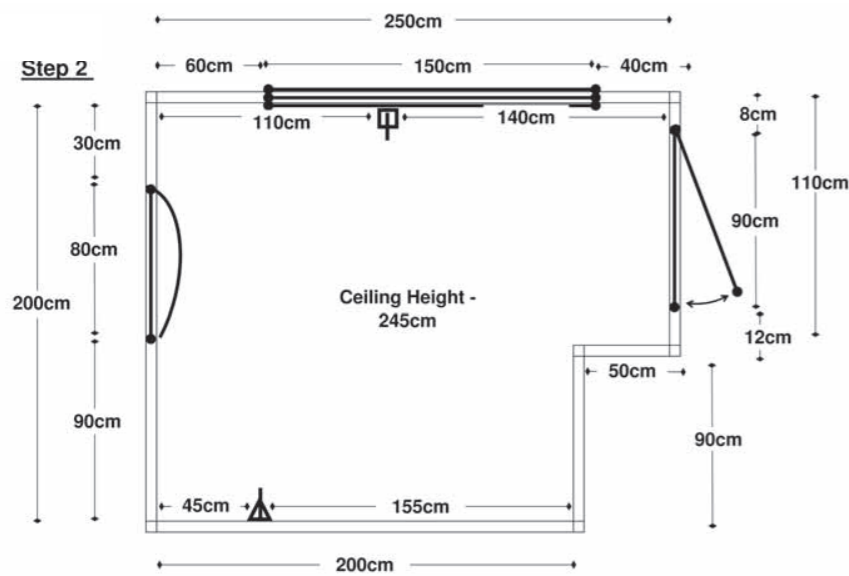

Sketch a diagram of your kitchen, with all the walls, windows, entrances and exits shown.

Measure all the sides that you have sketched either in cm's or mm's. Measure the ceiling height.

STEP 2

Sketch all doors and windows; plug, stove, light, plumbing and other electrical or plumbing points that need to be marked. **Start at the top left hand corner** of your sketch and **continue clockwise** around the room until each point has been accurately measured (include the frame in the measurements for the windows and doors) – also measure the respective distances from the corner of the walls.

Use the following **Key** to reference the features in your kitchen

Please use the **UCAN measure-up pad** to sketch your kitchen.

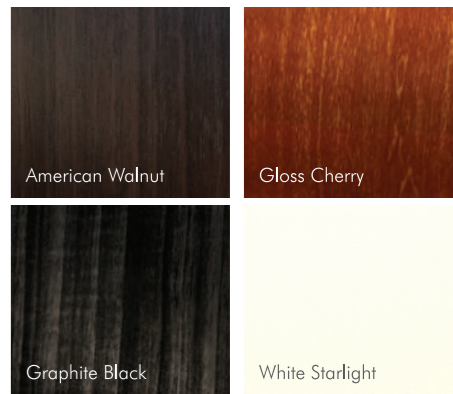

Remember to measure all your appliances and other units that may form part of your kitchen. Each small square represents 100mm. Each big square represents 1000mm.

Door Colour: _____ Handle Type: _____ Counter: _____

	FRIDGE	MICROWAVE	EYE LEVEL OVEN	UNDER COUNTER OVEN	HOB	EXTRACTOR	SINK	WASHING MACHINE
